ABB Drives Experts Supply, Drive Hire, Service & Support

360° Support to simplify your drive maintenance and optimise performance throughout the life of your assets.

Trust APDS

APDS Ltd was the first company in the UK to be accredited as an ABB Authorised Value Provider and are the only authorised ABB Drives and Motors Service Centre in the South West and South Wales.

We are your emergency service for your ABB drives and motors and our repair and support line operates 24/7 365 days a year – You just need to give us a call on 01179 822 049. We provide a flexible approach and carry out both on and off-site maintenance and repairs to suit you.

Access to a complete range of ABB Drives is just a phone call away along with expert advice and competitive prices.

- Full range of 0.37 KW to 500 KW ABB Drives in stock
- Same day delivery available with next day delivery as standard
- ABB accredited installation and commissioning service available

Services you can rely on. Delivered by our own Expert Engineers.

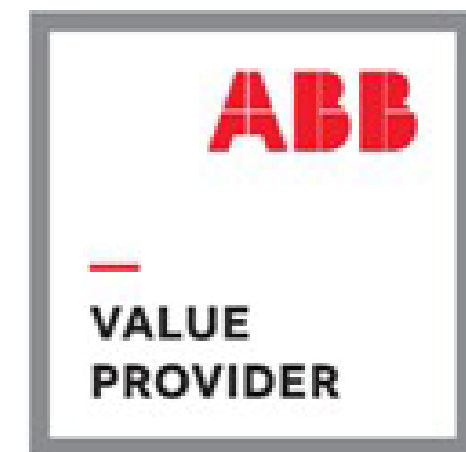

We provide more than just a comprehensive stock of ABB variable speed drives and motors.

The team at APDS Ltd have years of expertise and knowledge between us, which means we are able to offer all our customers the support and guidance they need to get the best out of the products we supply.

We work with a broad range of sectors from industry to building maintenance and help businesses across the South West and Wales save energy, reduce costs and improve performance.

Even if you haven't bought your equipment from us, we can still help you make improvements. Why not book one of our FREE, no-obligation, on-site energy audits, so you can see for yourself how we can help your business.

There is no financial outlay needed from you and no commitment to make any purchase. We are confident the result of our audit speaks for itself.

Expert Services

INSTALLATION

Our ABB certified service Expert Engineers install the drive according to the client and the manufacturer's installation instructions.

INSTALLATION INSPECTION AND APPROVAL

Approved installation increases safety in your working environment.

DRIVE REGISTRATION

Your drive with its serial number and installation and commissioning information is registered in the ABB database.

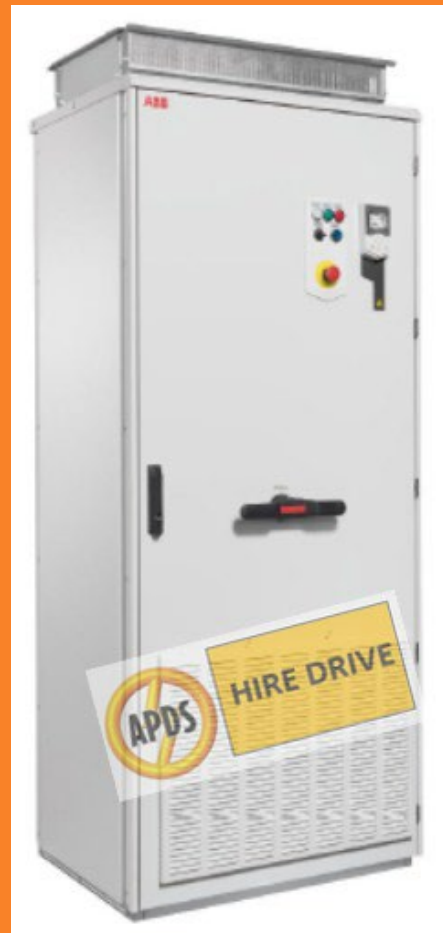

COMMISSIONING

APDS provides you with the standard commissioning report including backup files as well as safety documentation. Copies of the documents are saved in the APDS database.

ABB DRIVE HIRE

At APDS, we offer drives2GO : the APDS drive hire service – tailor-made to meet your production needs and avoid costly downtime and loss of production. Whether your inverter drive has broken down, you need to address critical downtime problems, or you simply want to evaluate energy savings before committing to a long-term investment, hiring a drive can make practical and financial sense. Contact us to arrange your suitable drive **11-500kW available along with our expert installers when required.**

PARTS AND SPARES MANAGEMENT

Installed ABB inverter drives should be maintained according to detailed product specific schedules as recommended by ABB. Regular preventive maintenance allows you to budget for your servicing costs and optimises the life span of your variable speed drive.

PREVENTATIVE MAINTENANCE

Annual inspections and component replacements carried out by highly trained engineers in accordance with ABB's maintenance schedules. Your peace of mind knowing APDS will only use new ABB spare parts, which are selected to match the maintenance schedule and bundled within preventive maintenance kits.

HEALTHCARE, INSPECTION AND AUDIT OF YOUR DRIVES ESTATE

Our certified engineers will carry out detailed measurements and inspection of your drive population, whatever the make or model, and assess the current condition of your equipment. We will provide detailed recommendations for short- and long-term maintenance. This can all be done during your planned shutdown period.

LIFECYCLE MANAGEMENT

Many of the drives used by industries are approaching 20 years old. With careful maintenance throughout this period, the drives should still be giving good service. But there comes a point in any drive's life cycle where the decision must be taken: do you replace or upgrade? The increased age of the installed drive makes it less reliable and less efficient. The upgrade path should be planned and controlled which is what APDS is able to offer you, which means you keep your process downtime to a minimum.

MAINTENANCE AND END OF LIFE

Your choice to pick the right time in your production schedules to maintain or upgrade.

The future of your drives and systems depends on the service you choose. Your choice should be based on a well-informed decision. We have the expertise and experience to help you find and implement the right service for your assets. You have our guidance and full support along the course you take, throughout the entire lifetime of your drives. Well-planned maintenance actions extend the lifetime of your drives. To make maintenance planning easier, ABB has developed a four-phase life cycle management model which defines service availability for each drive throughout its lifetime. We help you achieve lifelong performance from your ABB drive population.

TRAINING

Your training is tailored to suit your industry and applications on site.

APDS can offer certified training courses on all aspects of ABB Variable Speed Drives at our training facility in Avonmouth, Redruth or even at your site, whichever you find more convenient.

Engineers also need training and support, and the UK industry needs to empower its engineers and trust their judgement. Most drives that are installed onto end user's plants are not always set correctly for energy savings.

We can show you how to optimise your drives to get the very best performance and Energy saving where appropriate. Site engineers need to keep in touch with us to get appropriate training they need, basic or advanced.

The result will be more efficient processes, lower running costs and ultimately, providing you with a better bottom line.

In addition to “live” drives training rigs we have a PID unit with a pump and pressure sensor so we can train on setting up closed loop systems.

To book your training course, please contact us today on 01179 822 049.

SERVICE AGREEMENTS

To meet your specific requirements, APDS agreements are custom-tailored to supplement your in-house expertise and provide the additional capabilities you need to keep asset performance at peak levels.

From on-call support, outage coverage, predictive, preventive and corrective maintenance services to multi-engineer resident service contracts, to complete maintenance outsourcing, APDS meets your unique maintenance service needs.

**VALUE
PROVIDER**

Health in Wales

“APDS quickly arrive at a good understanding of our requirements and give a clear assessment of the options available and their recommendations. I have a busy schedule and appreciate the full support provided through their process, from start to finish. I have full confidence that APDS offers the best advice and arranges delivery with great professionalism and complete reliability.”

“APDS provide a very efficient, reliable service and support owner”.

ROCKWOOL

"An easy company to deal with making my job easier".

**BRISTOL
WATER**

“We were attracted to APDS because they clearly had the competence to do the job; were certified installers of ABB drives, which are quality drives; and also produced the lowest tender,” says the Bristol Water Engineering director. We would certainly consider APDS and ABB for other similar jobs as using them has produced a good outcome for us at Purton.”
